

Janet Agada

Product Manager · 0→1 Products

Abuja, Nigeria · agadaejanet@gmail.com · [linkedin.com/in/janet-agada-6a7372200](https://www.linkedin.com/in/janet-agada-6a7372200) · janet-agada-portfolio.vercel.app

SUMMARY

Product Manager specialising in 0→1 product development, taking digital products from an undefined problem to a live, scaling platform. Across 6 shipped products spanning Beauty Tech, Travel, AI, EdTech, and event marketplaces, I own the full lifecycle: problem definition, system architecture, documentation, engineering coordination, and launch. I design products as complete systems, write specifications developers build from without ambiguity, and stay accountable until users get real value. Available for remote and hybrid roles globally.

EXPERIENCE

Brisev · Product Manager, 0→1

Contract · Remote · Sept 2024 – Present

Glow (glown.io): a booking and business-management platform for beauty professionals, built from zero.

- Led the full 0→1 lifecycle; 15+ beauty businesses live, flagship salon manages 388 clients and runs monthly payroll up to ₦3.2M.
- Chose service-first booking over the industry-default provider-first model, cutting discovery friction and lifting visibility for niche providers, a decision that shaped the entire platform.
- Expanded a booking tool into an operating system (reviews, client segmentation, multi-channel messaging, commission-based payroll); wrote all PRDs and edge-case docs, so engineering needed minimal clarification.

Active Tech · Project Manager, Digital Products

Full-time · Remote · Dec 2025 – Present

- **AmanaCruise** (amanacruise.com): ran user research and simplified complex cruise-booking flows for first-time travellers; managed the full cycle through QA and launch readiness.
- **Traders College** (traderscollege.co): turned learner research into requirements and course structure; coordinated MVP and structured beta (MVP complete, launch-ready).

TM Labs · Product Manager

Contract · Hybrid, Abuja · Jun 2025 – Apr 2026

- **Confette** (confette.co): Nigeria's three-sided event marketplace (organiser, vendor, admin). Modelled the full bidding lifecycle as a state machine (Draft → Open → Bidding → Vendors Booked → Completed, plus Disputed), and designed vendor trust & safety, verification, suspension cascades, and counter-bid budget guards that prevent silent over-commitment.
- **Juyonna** (juyonna.com): a modular multi-service travel and logistics platform, Phase 1 live with 4 core modules. Designed 10+ services as separate modules on one shared core so each ships on its own; built the payment setup (Paystack, partner-specific fees, currency conversion, offline reconciliation).

Red Bracket · Product Manager, Development & Delivery

Contract · Remote (US) · Jul 2025 – Sept 2025

Optima AI: an AI-powered document processing and analysis platform for enterprise clients.

- Coordinated engineering across time zones to ship on time and on spec, keeping scope aligned to client requirements throughout.
- Client feedback (Head of Engineering): "Her documentation was so precise that our engineering team rarely needed clarification."

CORE COMPETENCIES

Product & delivery: 0→1 development · problem definition · roadmap & go-to-market · modular / system architecture · API integration strategy · data modelling · PRDs, specifications & edge-case documentation · engineering coordination · sprint management · QA & launch readiness · user research.

Technical: builds and ships frontends in React & Tailwind CSS (with Paystack payments) using AI-native tooling (Claude, Cursor, Lovable, Magicpatterns), so specs stay grounded in what is buildable.

Tools: Notion · Google Docs · Jira · Trello · Asana · Figma · Lovable · Cursor · Playwright · ChatGPT · Claude · Magicpatterns · Slack · Discord · Paystack.

EDUCATION

Master of Public Health, Bingham University, Nigeria

Bachelor of Science, Kaduna State University, Nigeria
