

Janet Agada

Product Manager · 0→1 Products

Abuja, Nigeria · agadaejanet@gmail.com · [linkedin.com/in/janet-agada-6a7372200](https://www.linkedin.com/in/janet-agada-6a7372200) · janet-agada-portfolio.vercel.app

SUMMARY

Product Manager specialising in 0→1 product development, taking digital products from an undefined problem to a live, scaling platform. Across 5 shipped products in Beauty Tech, Travel, AI, and EdTech, I own the full lifecycle: problem definition, system architecture, documentation, engineering coordination, and launch. I design products as complete systems, write specifications developers build from without ambiguity, and stay accountable until users get real value. Available for remote and hybrid roles globally.

EXPERIENCE

Brisev · Product Manager, 0→1

Contract · Hybrid, Abuja · Sept 2024 – Present

Glow (glown.io): a booking and business-management platform for beauty professionals, built from zero.

- Led the full 0→1 lifecycle (problem, architecture, documentation, engineering coordination, go-live); 15+ beauty businesses live, flagship salon manages 388 clients and runs monthly payroll up to ₦3.2M.
- Chose service-first booking over the industry-default provider-first model, cutting discovery friction and lifting visibility for niche providers, a single decision that shaped the entire platform.
- Expanded a booking tool into an operating system: reviews, client segmentation, multi-channel messaging (SMS/WhatsApp/email), and commission-based staff payroll.
- Wrote all PRDs, user flows, and edge-case docs; engineering needed minimal post-handoff clarification (per client testimonial).

Active Tech · Project Manager, Digital Products

Full-time · Hybrid, Abuja · Dec 2025 – Present

Product across multiple client-facing platforms.

- **AmanaCruise** (amanacruise.com): ran user research and simplified complex cruise-booking flows for first-time travellers; managed the full cycle through QA and launch readiness.
- **Traders College** (traderscollege.co): turned learner research into requirements and course structure; defined learning workflows and coordinated MVP and structured beta (MVP complete, launch-ready).

TM Labs · Product Manager, Platform Architecture

Contract · Hybrid, Abuja · Dec 2025 – Apr 2026

Juyonna (juyonna.com): a modular multi-service travel ecosystem. Phase 1 complete, 5 modules live.

- Architected a modular-first platform of 10+ independent verticals sharing one core infrastructure layer; chose modular over monolithic, turning a 12-month big-bang launch into a rolling revenue strategy.
- Designed the payment architecture (Paystack, partner-specific fee logic, real-time currency conversion, offline reconciliation) and coordinated multi-partner API integrations across logistics, insurance underwriting, and study-abroad matching.

Red Bracket · Product Manager, Development & Delivery

Contract · Remote (US) · Jul 2025 – Sept 2025

Optima AI: an AI-powered document processing and analysis platform for enterprise clients.

- Coordinated engineering across time zones to ship on time and on spec, keeping scope aligned to client requirements throughout.
- Client feedback (Head of Engineering): "Her documentation was so precise that our engineering team rarely needed clarification."

CORE COMPETENCIES

Product & delivery: 0→1 development · problem definition · roadmap & go-to-market · modular / system architecture · API integration strategy · data modelling · PRDs, specifications & edge-case documentation · engineering coordination · sprint management · QA & launch readiness · user research.

Tools: Notion · Jira · Trello · Figma · Slack · Discord · Lovable · Cursor · ChatGPT · Claude · Magicpatterns · Paystack.
